INTRODUCTION

Introduction

Community Health Statistics

The Community Health Statistics unit was created to provide a means of sharing information about the health behaviors, diseases, injuries, and demographic characteristics of specific populations in San Diego County. This unit aims to supply health professionals with community level data describing the health trends and needs of the residents of our County. Community Health Statistics also provides or refers persons to available local, state and national statistics.

Purpose

This profile is a compilation of information made available to the public health community and public policy-makers to better understand and manage the health and well-being of the residents of our County.

The purpose of this profile is to provide detailed information about the health and characteristics of the people living in San Diego County. It is designed to help the Health and Human Services Agency staff in each of the Health and Human Services Regions (Regions) identify problems and priority needs within their communities.

Regional Data

Please see [Important Information](#) in the data guide section for explanation of geographic boundaries as well as information on methods used here, age adjusted rates, and notes on comparing data.

Navigating the Document

This PDF document is intended for electronic viewing, online or downloaded to your computer; this allows full navigation ability to jump through the document. Using the online version will preserve the links and full navigation ability as well as ensure the most recent version of the document is being used.

Use **links** to jump to a section or page from a list

The Table of Contents (page 4) has many links to quickly jump to the specific section of interest. Within the document, some title pages have lists that are linked to quickly jump to a topic within a section. These links are not underlined, but can be identified when the hand icon () turns into a pointing hand () when hovering over an item.

There are also links outside the document for more information on a subject. These are underlined and require internet access. They may be identified by the pointing hand with a “w” for web access.

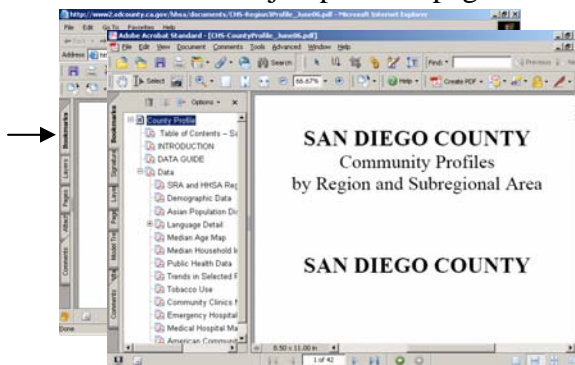

Use the navigation bar at the bottom of the window to move through a document:

- A- go to 1st page
- B- go back one page
- C- enter a page number to go to
- D- go forward one page
- E- go to last page

Use bookmarks to jump to a section

This is a built-in table of contents that is viewed to the side of the document and can be left open while viewing the document. To access this, click on the bookmarks tab on the left side of window. Use the (+) or (-) symbols to expand or collapse the list. Click on a bookmark to jump to that page.

For more information, contact:

DATA GUIDE

Important Information for Data Users

Please Review This Section Before Using the Following Public Health Data

For abbreviations used in data sources, see [Data Sources](#).

Diagnoses:

Disease definitions for most indicators are based on ICD-CM coding. Two versions of ICD coding are used in this document depending upon the data source, ICD-9 or ICD-10. ICD-CM based data for San Diego is comparable whether obtained using the 9th or 10th revision; codes used are listed in footnotes for appropriate tables. Healthy People 2010, USA, California data are shown if available and comparable to local data; definitions for these can be found via [Healthy People 2010 Operational Definitions](#).

The death data used in this document only include underlying cause of death. That means that deaths are categorized only by the disease or injury that initiated the chain of events leading to death and not by the immediate cause or any other contributing causes. For example, a diabetic who died of heart disease resulting from complications of diabetes would only be included among diabetes-related deaths. Similarly, Hospital Discharge and Emergency Department Discharge data is reported by the primary diagnosis at time of discharge for which the medical encounter occurred. In some cases, indicators are based on case definitions; meeting specified clinical and/or laboratory criteria not ICD-CM coding.

Comparing Data:

Caution must be used when exploring data from multiple sources or even the same data prepared by different analysts; comparisons may not be appropriate. Attention to accompanying information is important in order to note differences including, but not limited to: data sources, data preparation, diagnosis/case definitions, rate constant (i.e. per 100,000 or 1,000), geographic units, persons included in the data (i.e. location of occurrence vs. location of residence, or among live births not total pregnancies).

Data from different tables must not be modified (i.e. aggregated or subtracted). For example, pedestrian deaths can not be added to nonfatal pedestrian injuries to determine total injuries. In this case, one database is recorded by location of residence, while the other is by location of occurrence. If you need assistance or additional data not contained here, please contact the Community Health Statistics unit.

Geography: Understanding Geographic Units used in Health Data

Many different geographic units are used throughout San Diego County. In this document, boundaries for Regions and Subregional Areas (SRA) used here are based on

census tracts and approximate Health and Human Service Agency Region (HHSA Region) boundaries which are based on zip codes.

Many data users have expressed the desire for community level data, beyond the HHSA Region (which are large aggregations of zip codes). Several levels of geography may be considered, such as, Subregional Area, Census Tract, Zip Code, or City. In order to provide community level health data and compare populations, it is important to have stable geographic units and units that are compatible with population data estimates.

While most health data is reported by zip code, zip codes may change at any time throughout the year – making annual aggregated estimates difficult. Additionally, since zip codes may change from one year to the next, comparing zip code data over time may introduce a level of imprecision. Subregional Areas (SRAs) are small, community level geographic units based on census tracts which are stable between census years (i.e. change only every 10 years, if at all). Population estimates are available at this level with high level of accuracy. However, health data for an SRA must be estimated based on reported zip code data.

Types of data available for Geographic Boundaries

Zip Codes:	Census Tracts:
HHSA Region	Subregional Area (SRA)
Health Services	Major Statistical Area (MSA)
	Region (approximated HHSA Region)

In this document community level (SRA) data is aggregated to larger regional levels. Currently, Region aggregations based on SRAs closely approximate, but do not directly correspond to HHSA Regions. In order to have more accurate community level data and enable reliable comparisons over time and place, SRA Region aggregations are used in lieu of HHSA Regions. Other data preparers that provide direct HHSA Region level data may differ slightly from the data presented here; however, any difference would not be expected to impact any decisions related to policy, planning, or resources for any particular area. There are 3 zip codes which are primarily affected by the differences in method of aggregation to Region or HHSA Region (see table below). A list of zip codes representing each Region is included at the beginning of the Region section within each Profile, as well as a complete listing in the County Profile.

The only data in this document to which the above information *does not* apply is the CHIS (California Health Interview Survey) data in the Public Health Data Section. Data in this survey is collected by HHSA Region and can not be estimated for SRA based Regions.

Methods of Aggregating Data

HHSA	Community Profiles		
HHSA REGION ←	Zip Code	Subregional Area (SRA) →	Region
North Coastal	92014	Del Mar-Mira Mesa	North Central
North Coastal	92091	North San Diego	North Inland
North Central	92131	Poway	North Inland

Rates, Age Adjusted Rates: Understanding Rates and Age Adjusted Rates

The public health data in the Community Profiles include crude rates (from this point forward referred to as rates) for Regional and Subregional (SRA) level data. Additionally, age adjusted rates are provided for County level data in many cases.

For comparison, Healthy People 2010 Targets are included, along with comparable USA and California rates. Many Healthy People 2010 Targets are based on age adjusted rates; these are indicated by “age adjusted population”. When a Healthy People target listed is based on an age adjusted rate, the comparable rates for USA and California are also age adjusted.

A rate is the number of cases divided by the population, usually multiplied by a constant. For example 987 cases, divided by population of 654,321 would be a rate of 150.8 per 100,000 population. This means for every 100,000 people, 150-151 cases would be expected.

Calculations of age adjusted rates are slightly more complex. They take into account the age of each case relative to a standard age distribution of a reference population. Recently a new reference population was determined referred to as “2000 US standard population”, previously used was a reference population from 1940. The 2000 US standard population proportions more closely reflect the current age distribution of the entire US population.

Age adjusted rates represent the rates that would be expected if a population of interest had the same age distribution as the standard population. This removes the effect of age when comparing rates to identify risk in a population. This is important in many cases when comparing risk “across populations with different underlying age structures”¹.

Since many causes of mortality disproportionately affect older persons, disease mortality is often reported with age adjusted rates. This is the case with many Healthy People 2010 Targets, particularly death rates.

Age adjusted rates are used to compare relative risk (over time or between populations), while removing the effect of differences in the age of a population. Age-adjusting shows differences between groups that are not due to differences in age distribution. “Age adjusted rates should be viewed as relative indexes rather than as direct or actual measures” of risk¹.

For many users of these data, the magnitude of an issue is important, not only the risk outside of age. Often planning and resource needs are based on data. In this case, knowing that a group contains an older population is valid & important for planning for those diseases which affect different aged population sectors.

Additionally, differences may be due to other reasons besides age, such as gender or race/ethnicity. One may want to consider several of these demographic factors when examining a health issue. Each Profile contains demographic data for each Region and

SRA, including: age, gender, race/ethnicity distributions, income, occupation, housing and education data. Many of these factors have been implicated at the roots of health disparities.

1: <http://www.cdc.gov/nchs/datawh/nchsdefs/ageadjustment.htm>

Data Sources

Health and demographic data are available from a variety of sources, represented by three different categories of data. Population data, such as the census, are collected from the entire population. Sample or survey data are collected from a portion of the population, and extrapolated to represent the entire population. Administrative data are collected based on an organization's day-to-day operations, such as the prehospital database. The following data sources were used in the preparation of this report.

American Community Survey (ACS): ACS is a new nationwide survey designed to provide communities a fresh look at how they are changing. It is intended to eliminate the need for the long form in the 2010 Census. The ACS collects information from U.S. households similar to what was collected on the Census 2000 long form, such as income, commute time to work, home value, veteran status, and other important data. Information is available by county.

California Health Interview Survey (CHIS): CHIS is an important source of information on health and access to health care services. CHIS is a telephone survey of adults, adolescents, and children from all parts of the state. The survey is conducted every two years. CHIS is the largest state health survey and one of the largest health surveys in the United States. The survey provides state and county level information for health planning and comparison. Region level information will be available in 2007. A list of CHIS questionnaire topics is included. To see the actual survey questions, go to <http://www.chis.ucla.edu/topics.html>.

Emergency Department Data (ED Data): ED data are collected and maintained for most emergency hospitals in San Diego County. ED data elements include patient's home zip code, demographic information, source of payment, disposition, diagnoses and procedures performed for all patients treated and discharged from the ED.

HIV/AIDS Reporting System (HARS): HARS is used to report HIV and AIDS cases in San Diego County. HIV reporting began recently (July 2002), has not been evaluated and therefore is not available for zip code level analysis. The number of AIDS cases is available by zip code if the total is 5 or more.

Hospital Discharge Data: Discharge data are collected and maintained for most inpatient facilities in San Diego County. Discharge data elements include patient's home zip code, demographic information, source of payment, disposition, diagnoses and procedures performed for all patients admitted to the hospital for any condition.

Medical Examiner's Data: EMS receives an Investigative Summary and Autopsy for every individual who dies in San Diego County from a traumatic injury. Medical Examiner's Records contain injury related information including date and time of injury, incident location, patient home zip code, external cause of injury (ICD9 CM E code), age,

sex, race/ethnicity, vehicle make and type, law enforcement agency and report number, mechanism of injury and detailed narrative of injuries sustained.

Prehospital Database: EMS receives a prehospital patient record (PPR) for every patient seen by a paramedic or emergency medical technician. The PPR contains information includes demographics, incident zip code location, chief complaint, patient status, injury event information, restraint use, contributing factors, times and outcomes.

San Diego Association of Governments (SANDAG): SANDAG creates and maintains a tremendous quantity of demographic, economic, land use, transportation and criminal justice information about the San Diego region. Demographic data includes population characteristics like age, education, and employment. SANDAG develops annual demographic estimates and long range forecasts in addition to maintaining census data files. Data are available by County, SRA, zip code, and census tract.

STD Morbidity Surveillance Data: Data are available for three STDs: Chlamydia, gonorrhea and syphilis (primary and secondary). Information on age, gender, race/ethnicity are available for all 3 diseases. Data may be available at the zip code level, as this data element is incomplete.

Statewide Integrated Traffic Record System (SWITRS): SWITRS contains traffic collision data collected by the California Highway Patrol. Detailed information on the circumstances of the crash, drivers, passengers, and other victims are available by incident zip code.

Trauma Registry: EMS receives a Trauma Registry for every trauma patient admitted to any of the designated trauma center hospitals who meets one or more of the following criteria: length of hospitalization of 24 hours or more, death due to traumatic injuries, or transfer to or from another acute care hospital.

Vital Records Data: A birth certificate is required for every live birth in San Diego County; a death certificate is completed for every person who dies in San Diego County. Vital records data include information on birth (e.g. weight) or death (e.g. underlying and contributing causes of death) and basic demographic information by zip code.

Other abbreviations used in sources:

CA DHS – State of California, Department of Health Services

CDC – Centers for Disease Control and Prevention

CHIP – Community Health Improvement Partners

HASD & IC – Hospital Association of San Diego & Imperial Counties

NCHS – National Center for Health Statistics

NVSS- National Vital Statistics System

OSHPD – California Office of Statewide Health Planning and Development

SANDAG – San Diego Association of Governments

GLOSSARY:

Demographic Indicator Terms

Health Indicator Terms

Glossary of Demographic Indicator Terms

The following terms are defined by SANDAG.

Demographic Profile

Total Population: Total number of persons (residents) in an area.

Age Distribution: Total number of persons (residents) in an area by age group.

Median Age: Divides the age distribution into two equal parts; half of all persons are older than the median and half are younger.

Gender Distribution: Total number of persons (residents) in an area by gender.

Race/Ethnicity: Self-identification by people according to the race(s) and ethnicity with which they most closely identify. "Other" includes American Indian or Alaska Native, Hawaiian or Pacific Islander, those who identified two or more races, and other.

Education

Completed Education: The highest level of education completed in terms of the highest degree or the highest level of schooling completed.

Household Income

Household: A person or group of people living in a housing unit that serves as a primary place of residence.

Household Income: Total pre-tax annual income of all members of a household.

Income: Sum of wages, salary, commissions, bonuses, tips, self-employment income, interest, dividends, net rental income, royalty income, income from estates and trusts, Social Security or Railroad Retirement income, Supplemental Security Income (SSI), any public assistance or welfare payments from the state or local welfare office, retirement, survivor, or disability pensions, and any other sources of income received regularly.

Median Household Income: Divides the household income distribution into two equal parts; half of all households have incomes above the median and half have incomes below the median.

Persons per Household: The average number of persons living in a housing unit, calculated by dividing the household population by the number of occupied housing units.

Income per Person in HH: The average income per person living in a housing unit, calculated by dividing the Median Household Income by the Persons per Household.

Change from County: The percentage above or below the County of San Diego average income per person (i.e. \$18,707 for 2004 estimate).

Housing

Owner Occupied: Housing units that are occupied as a primary residence by the owner of the unit.

Renter Occupied: Housing units that are occupied as a primary residence by an individual other than the owner of the unit.

Residential Density: The total number of housing units per developed residential acre.

Industry

Industry of Civilian Employees: The kind of business conducted by a person's employing organization.

Professional, Scientific, Management, Admin: Category of industry that includes Professional, Scientific, Management, and Administrative.

Entertainment and Hospitality Industry: Category of industry that includes Arts, Entertainment, Recreation, Accommodations and Food Services.

Language

Primary Language Spoken at Home: The language currently used at home, either "English only" or a non-English language that is used in addition to English (bilingual) or in place of English.

Occupation

Employed Civilian Occupation Category (16+ Years): Category of occupation for those who are employed in the civilian work force. Does not include Armed Forces or unemployed. This category refers to the type of work one does on the job, not the industry by which they are employed.

Construction, Extraction, and Maintenance: Category of occupation including construction, extraction (such as mining) and maintenance or repair jobs.

Farming, Fishing, and Forestry: Category of occupation including farming, fishing and forestry jobs.

Labor Force 16+ Years: Includes all residents 16 years old and over who are currently in the civilian labor force, plus members of the U.S. Armed Forces and those who are unemployed. This includes those who are either “at work” or “with a job but not at work”.

Management, Professional, and Related: Category of occupation including management (including farm managers), business and financial, computer and mathematical architecture and engineering, science (life, physical, and social), community and social service, legal, education and training and library, arts, design, entertainments, sports, and media, healthcare practitioners.

Production, Transportation and Material: Category of occupation including production, transportation and material moving jobs.

Sales and Office: Category of occupation including sales and office jobs.

Service: Category of occupation including healthcare support, protective service, food preparation and serving, building and grounds cleaning and maintenance, personal care and service.

Unemployed: Civilians 16 years old and over who are neither "at work" nor "with a job but not at work" during the reference period, and were actively looking for work during the last four weeks and were available to accept a job.

Personal Vehicles

Vehicle Availability: Passenger cars, vans, and pickup or panel trucks of 1-ton capacity or less kept at home and available for use by household members. Excludes vehicles kept at home but used only for business purposes.

Poverty

Income Percent of Poverty Level: The percentage of the poverty threshold that the family’s household income is at.

Family: Householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption.

Population: Families or individuals whose total income falls below the poverty threshold set by the Census Bureau, according to family size and composition.

Poverty Level: Minimum annual income below which is considered poverty. Poverty level information for 2006 by family size can be found by [clicking here](#).

School Enrollment

Percent Enrolled: The percentage of children ages 4 to 18 years who were enrolled in grades K – 12. Found by dividing the number of enrolled students (K-12) by the total population ages 4 to 18 years.

Percent Public: The percentage of all students enrolled in grades K – 12 who attend a private school. A private school is one that is supported and controlled primarily by religious organizations or other private groups.

Percent Private: The percentage of all students enrolled in grades K – 12 who attend a public school. A public school is one that is supported and controlled primarily by a federal, state, or local government (including tribal schools).

Single Parent Homes

Single Parent Household: The percentage of all families with "own children" under age 18 living in the household, who are headed by a person, male or female, without a spouse present in the home. "Own children" are never-married children under 18 who are related to the householder by birth, marriage, or adoption

Unemployment

Unemployed: Percentage of civilians 16 years old and over who are neither “at work” nor “with a job but not at work” during the reference period, and were actively looking for work during the last four weeks and were available to accept a job.

Glossary of Health Indicator Terms

The following are definitions of health indicator terms used in this document, including databases from which data is provided in italics. For more information, see **Data Sources**.

Disease data here represent only primary diagnoses (or underlying cause of death) and do not include secondary diagnoses, unless otherwise noted. Injury data using ICD10 coding (death) only uses underlying cause of death. Injury data using Ecodes from Emergency Department do include primary or secondary diagnoses of injury, as noted.

The majority of the data here are reported by location of residence of the subject. Non-fatal motor vehicle injury data from SWITRS is reported by location of occurrence; while motor vehicle death data (from Death Statistical Master Files) is reported by location of residence.

Coronary Heart Disease: ischemic and hypertensive heart disease, ICD9 codes 402, 410-414, 429.2; ICD10 codes I11, I20-I25. *Death, Hospital, Emergency Department.*

Heart Disease: any kind of heart disease, as asked in survey: “Has a doctor ever told you you have heart disease?” *CHIS.*

Stroke: cerebrovascular disease, ICD9 codes 430-438; ICD10 codes I60-I69. *Death, Hospital, Emergency Department.*

Diabetes: Diabetes Mellitus, includes insulin-dependent and non insulin-dependent diabetes, ICD9 code 250; ICD10 codes E10-E14. *Death, Hospital, Emergency Department.*

Diabetes: any diagnosis of diabetes by a doctor, as asked in survey: “Has a doctor ever told you you have Diabetes?” In 2001, responses were either yes or no. In 2003 and 2005, possible responses were yes, no, borderline/pre-diabetes. Results from 2001 may not be directly comparable to 2003 and 2005. *CHIS.*

Asthma: ICD9 code 493; ICD10 codes J45-J46. *Death, Hospital, Emergency Department.*

Female Breast Cancer: ICD10 code C50. *Death.*

Prostate Cancer: ICD10 code C61. *Death.*

Cervical Cancer: ICD10 code C53. *Death.*

Colorectal Cancer: cancer of the colon, rectum or anus, ICD10 codes C18-C21. *Death.*

Lung Cancer: cancer of the trachea, bronchus or lung, ICD10 codes C33-C34. *Death.*

Tuberculosis (TB): new active cases reported to and confirmed by County Public Health Services, see [CDC clinical case definition](#). *TB Registry*.

Chronic Hepatitis C: cases reported by providers* to County Public Health Services, see [CDC case definition](#). *Hepatitis Reporting*.

AIDS: new cases reported by providers* to County Public Health Services, cases need not be investigated and confirmed, see [CDC clinical case definition](#). *HIV/AIDS Reporting System*.

Chlamydia: new cases reported by providers* to County Public Health Services, cases need not be investigated and confirmed, see [CDC clinical case definition](#). For estimated Chlamydia (Regional Tables), cases with unknown residence are statistically distributed to Regions to better estimate Regional needs. SRA Tables do not include a substantial number of cases reported in San Diego County, due to cases with unknown residence. Approximately 30%, or 2500 Chlamydia cases per year, are missing residence data. Chlamydia numbers are underestimated at the SRA level. *STD Reporting*.

Gonorrhea: new cases reported by providers* to County Public Health Services, cases need not be investigated and confirmed, see [CDC clinical case definition](#). For estimated Gonorrhea, cases with unknown residence are statistically distributed to Regions to better estimate Regional needs. SRA Tables do not include a substantial number of cases reported in San Diego County, due to cases with unknown residence. Approximately 30%, or 600 gonorrhea cases per year, are missing residence data. Gonorrhea numbers are underestimated at the SRA level. *STD Reporting*.

Primary and Secondary Syphilis: new cases reported to and confirmed by County Public Health Services, see [CDC clinical case definition](#). *STD Reporting*.

Live Birth: a product of conception, which after complete expulsion or extraction from the mother, breathes or shows any other evidence of life. This is not synonymous with the term “pregnancy”, which can result in a miscarriage, fetal death, induced abortion or live birth. *MCFHS*.

Early Prenatal Care: Care beginning during the 1st trimester of pregnancy. Rates (%) are calculated amongst those births whose start of prenatal care is known (i.e. those whose start of care is unknown or missing are excluded from the denominator). *MCFHS*.

Low birth weight: birth weight less than 2,500 g (approximately 5.5 lbs). *MCFHS*.

Unintentional Injury: ICD9 Ecodes E800-E869, E880-E929; ICD10 codes V01-X59, Y85-Y86. This generalized unintentional injury may overlap with specific indicators below, such as drowning, smoke/fire, suffocation, falls, motor vehicle or pedestrian

deaths, as well as the unintentional portion of overdose/poisoning and firearm injuries. Emergency Department data injuries are identified from both primary and secondary Ecodes. *Death, Emergency Department.*

Drowning: Accidental drowning and submersion, including those caused by accident to watercraft or related to water-transport, ICD10 codes W65-W74, V90, V92. Emergency Department data injuries are identified from both primary and secondary Ecodes *Death, Emergency Department.*

Accidental exposure to smoke, fire or flame: ICD10 codes X00-X09. *Death.*

Unintentional suffocation: ICD10 codes W75-W84. *Death.*

Fall-related: accidental falls, ICD9 Ecodes E800-E886, E888; ICD10 codes W00-W19. Emergency Department data injuries are identified from both primary and secondary Ecodes. *Death, Hospital, Emergency Department.*

Overdose/Poisoning: all intents, ICD-9 Ecodes E850-E869, E950-E952, E962; ICD10 codes X40-X49, X60-X69, X85-X90, Y10-Y19, Y35.2, U01.6-U01.7. Emergency Department data injuries are identified from both primary and secondary Ecodes. *Death, Hospital, Emergency Department.*

Motor Vehicle Death: unintentional deaths of anyone involved in a motor vehicle accident (collision or non-collision) on a public road, including occupants, pedestrians, and cyclists, ICD10 codes V30-V39 (.4-.9), V40-V49 (.4-.9), V50-V59 (.4-.9), V60-V69 (.4-.9), V70-V79 (.4-.9), V81.1, V82.1, V83-V86 (.0-.3), V20-V28 (.3-.9), V29 (.4-.9), V12-V14 (.3-.9), V19 (.4-.6), V02-V04 (.1, .9), V09.2, V80 (.3-.5), V87 (.0-.8), V89.2. *Death.*

Non-fatal Occupant Injuries: those injured in motor vehicle accidents occurring on public roads with injury or property damage; occupants are drivers or passengers of motor vehicles such as cars, trucks, or buses. Data is by location of occurrence. *SWITRS.*

Alcohol-related: those injured in motor vehicle accidents occurring on public roads with injury or property damage where alcohol was involved. The drinking driver need not be injured and need not be declared at fault, nor tested for being under the influence of alcohol. Data is by location of occurrence. *SWITRS.*

Drinking Drivers: location of drivers involved in motor vehicle accidents occurring on public roads with injury or property damage. The drinking drivers need not be injured and need not be determined to be at fault nor impaired. Data is by location of occurrence. *SWITRS.*

Active Restraint Use: those injured in motor vehicle accidents occurring on public roads with injury or property damage where active restraints were used. Rates are calculated

amongst those whose status of restraint use/non use was known. Data applies to those ages 6 years and older. Data is by location of occurrence. *SWITRS*.

Child Restraint Use: those injured in motor vehicle accidents occurring on public roads with injury or property damage where child restraints were used. Rates are calculated amongst those whose status of restraint use/non use was known. Data applies to those ages 0-5 years. Data is by location of occurrence. *SWITRS*.

Pedestrian death attributed to Motor Vehicle Accidents: unintentional deaths of pedestrians involved in motor vehicle accidents on a public road, ICD10 codes V02-V04 (.1, .9), V09.2. *Death*.

Homicide: deaths that are intentionally inflicted by another, ICD10 codes U01-U02, X85-Y09, Y87.1. *Death*.

Assault injury: injuries that are intentionally inflicted by another, ICD9 codes E960-E969. Emergency Department data injuries are identified from both primary and secondary Ecodes. *Emergency Department*.

Suicide: deaths that are intentionally inflicted by self, ICD10 codes U03, X60-X84, Y87.0. *Death*.

Self-inflicted injury: injuries that are intentionally inflicted by self, ICD9 codes E950-E959. Emergency Department data injuries are identified from both primary and secondary Ecodes. *Emergency Department*.

Firearm-related: all intents, ICD9 Ecodes E922, E955.0-E955.4, E965.0-E965.4, E970, E985.0-E985.4; ICD10 codes W32-W34, X72-X74, U01.4, X93-X95, Y22-Y24, Y35.0. Emergency Department data injuries are identified from both primary and secondary Ecodes. *Death, Hospital, Emergency Department*.

Dental-related: injury as well as non-injury medical/dental primary diagnoses, ICD9 codes 521-523, 525.3, 525.9, 873.63, 873.73. *Emergency Department*.

* Providers may refer to health care providers (e.g. physicians, nurses, or hospital administrators), laboratories, or school administrators who are legally mandated to report diseases indicated in CCR, Title 17, sections 2500, 2508, and 2505.

San Diego County Language Detail American Community Survey, 2004 *Language Spoken at Home and Ability to Speak English*

The following tables refer to primary language spoken at home by ability to speak English. In this case, the term “bilingual” refers to those who speak a language other than English at home, and speak English very well. The term “mono-lingual” refers to those who either speak only English in the home, or those who speak another language in the home and speak English less than very well. Those who speak multiple languages, but not English are listed in the mono-lingual table. Below is information on the language detail portion of the survey, adapted from the 2004 Subject Definitions document. For more information on the American Community Survey, go to <http://www.census.gov/acs/www/index.html>.

Language Spoken at Home – Data on language spoken at home were derived from the answers to questions asked in the 2003-2004 American Community Survey (Items 13a and 13b). These questions were asked of persons 5 years old and older. The first question asks if the person currently speaks a language other than English at home. The reply should be “No” if a language was spoken only at school or work or if speaking was limited to a few expressions or slang. The reply should’ve been “Yes” if they sometimes or always speak a language other than English at home and the name of that language should have been written in on the form. If the person spoke more than one language other than English, the person was to report the language spoken most often or, if they cannot determine the one spoken most often, the language learned first.

These questions referred to a language spoken at home in an effort to measure the current use of a language other than English. Persons who knew languages other than English but did not use them at home, or who only used them elsewhere, were excluded. Most respondents who reported speaking a language other than English at home also speak English. The questions did not permit determination of the primary language of persons who spoke both English and another language.

Household Language – In households where one or more people (age 5 years old or over) speak a language other than English, the household language assigned to all household members is the non-English language spoken by the first person with a non-English language as specified in the Subject Definitions. Thus, a person who speaks only English may have a non-English household language assigned to him/her in tabulations of individuals by household language.

Ability to Speak English – People 5 years old and over who reported that they spoke a language other than English in the previous question were asked to indicate their ability to speak English based on one of the following categories: “Very well,” “Well,” “Not well,” or “Not at all.” The data on ability to speak English represent the person’s own perception of his or her own ability or, because American Community Survey questionnaires are usually completed by one household member, the responses may represent the perception of another household member.

San Diego County, California
Population and Housing Narrative Profile: 2005
 Data Set: 2005 American Community Survey
 Survey: 2005 American Community Survey

NOTE. Data are limited to the household population and exclude the population living in institutions, college dormitories, and other group quarters. For information on confidentiality protection, sampling error, nonsampling error, and definitions, see [Survey Methodology](#).

POPULATION OF San Diego County: In 2005, San Diego County had a household population of 2.8 million - 1.4 million (50 percent) females and 1.4 million (50 percent) males. The median age was 34.4 years. Twenty-seven percent of the population were under 18 years and 11 percent were 65 years and older.

The Age Distribution of People in San Diego County, California in 2005

Source: American Community Survey, 2005

For people reporting one race alone, 71 percent were White; 5 percent were Black or African American; 1 percent were American Indian and Alaska Native; 11 percent were Asian; less than 0.5 percent were Native Hawaiian and Other Pacific Islander, and 12 percent were Some other race. Three percent reported Two or more races. Thirty percent of the people in San Diego County were Hispanic. Fifty-two percent of the people in San Diego County were White non-Hispanic. People of Hispanic origin may be of any race.

HOUSEHOLDS AND FAMILIES: In 2005 there were 1.0 million households in San Diego County. The average household size was 2.7 people.

Families made up 66 percent of the households in San Diego County. This figure includes both married-couple families (49 percent) and other families (17 percent). Nonfamily households made up 34 percent of all households in San Diego County. Most of the nonfamily households were people living alone, but some were comprised of people living in households in which no one was related to the householder.

The Types of Households in San Diego County, California in 2005

Source: American Community Survey, 2005

NATIVITY AND LANGUAGE: Twenty-three percent of the people living in San Diego County in 2005 were foreign born. Seventy-seven percent were native, including 46 percent who were born in California.

Among people at least five years old living in San Diego County in 2005, 36 percent spoke a language other than English at home. Of those speaking a language other than English at home, 68 percent spoke Spanish and 32 percent spoke some other language; 45 percent reported that they did not speak English "very well."

GEOGRAPHIC MOBILITY: In 2005, 81 percent of the people at least one year old living in San Diego County were living in the same residence one year earlier; 14 percent had moved during the past year from another residence in the same county, 2 percent from another county in the same state, 2 percent from another state, and 1 percent from abroad.

Source: American Community Survey, 2005

EDUCATION: In 2005, 85 percent of people 25 years and over had at least graduated from high school and 34 percent had a bachelor's degree or higher. Among people 16 to 19 years old, 5 percent were dropouts; they were not enrolled in school and had not graduated from high school.

The total school enrollment in San Diego County was 823,000 in 2005. Nursery school and kindergarten enrollment was 92,000 and elementary or high school enrollment was 506,000 children. College or graduate school enrollment was 225,000.

San Diego County Profile

Source: American Community Survey, 2005

DISABILITY: In San Diego County, among people at least five years old in 2005, 12 percent reported a disability. The likelihood of having a disability varied by age - from 5 percent of people 5 to 20 years old, to 9 percent of people 21 to 64 years old, and to 38 percent of those 65 and older.

INDUSTRIES: In 2005, for the employed population 16 years and older, the leading industries in San Diego County were Educational services, health care and social assistance, 19 percent, and Professional, scientific, and management, and administrative and waste management services, 14 percent.

Employment by Industry in San Diego County, California in 2005

Source: American Community Survey, 2005

OCCUPATIONS AND TYPE OF EMPLOYER: Among the most common occupations were: Management, professional, and related occupations, 40 percent; Sales and office occupations, 26 percent; Service occupations, 17 percent; Construction, extraction, maintenance and repair occupations, 9 percent; and Production, transportation, and material moving occupations, 8 percent. Seventy-six percent of the people employed were Private wage and salary workers; 15 percent were Federal, state, or local government workers; and 9 percent were Self-employed in own not incorporated business workers.

TRAVEL TO WORK: Seventy-eight percent of San Diego County workers drove to work alone in 2005, 11 percent carpoolled, 3 percent took public transportation, and 4 percent used other means. The remaining 4 percent worked at home. Among those who commuted to work, it took them on average 25.2 minutes to get to work.

INCOME: The median income of households in San Diego County was \$56,335. Eighty-three percent of the households received earnings and 17 percent received retirement income other than Social Security. Twenty-three percent of the households received Social Security. The average income from Social Security was \$13,100. These income sources are not mutually exclusive; that is, some households received income from more than one source.

POVERTY AND PARTICIPATION IN GOVERNMENT PROGRAMS: In 2005, 11 percent of people were in poverty. Sixteen percent of related children under 18 were below the poverty level, compared with 7 percent of people 65 years old and over. Eight percent of all families and 22 percent of families with a female householder and no husband present had incomes below the poverty level.

Source: American Community Survey, 2005

HOUSING CHARACTERISTICS: In 2005, San Diego County had a total of 1.1 million housing units, 7 percent of which were vacant. Of the total housing units, 63 percent were in single-unit structures, 33 percent were in multi-unit structures, and 4 percent were mobile homes. Twenty percent of the housing units were built since 1990.

Source: American Community Survey, 2005

OCCUPIED HOUSING UNIT CHARACTERISTICS: In 2005, San Diego County had 1.0 million occupied housing units - 606,000 (58 percent) owner occupied and 435,000 (42 percent) renter occupied. Three percent of the households did not have telephone service and 6 percent of the households did not have access to a car, truck, or van for private use. Multi Vehicle households were not rare. Forty percent had two vehicles and another 22 percent had three or more.

HOUSING COSTS: The median monthly housing costs for mortgaged owners was \$2,059, nonmortgaged owners \$388, and renters \$1,072. Forty-nine percent of owners with mortgages, 15 percent of owners without mortgages, and 55 percent of renters in San Diego County spent 30 percent or more of household income on housing.

Source: The California Tobacco Survey (CTS)

<http://www.cstats.info/>

The CTS is weighted to the 1990 California population by age, race/ethnicity, gender, and income level. The estimates represent the percentage of adults who report having used particular tobacco products.

* Since 1999, current smokers have been defined as the percentage of adults who report ever having smoked 100 cigarettes in their entire life and who report now smoking either every day (daily smoker) or some days (occasional smoker).

* Prior to 1999, current smokers were asked a variant of the smoking status question, with current smokers being defined as those persons who report a history of smoking 100 cigarettes in their entire life and who respond "yes" to the question "do you smoke now?"

This change in definition of current smokers has been found in previous research to increase current smoking prevalence estimates by approximately one percent.

† Daily smokers are defined as the percentage of adults who report ever having smoked 100 cigarettes in their entire life and who report now smoking every day.

‡ Occasional smokers are defined as the percentage of adults who report ever having smoked 100 cigarettes in their entire life and who report now smoking some days.

Table 2. Youth Tobacco Use in California and San Diego County, percent of survey respondents.

	2002		2004	
	SAN DIEGO	CA	SAN DIEGO	CA
Current Smoker[†]	18.3%	16.0%	15.1%	13.2%
Daily Smoker[‡]	3.0%	2.9%	1.4%	1.7%
Ever Smoked[§]	55.9%	51.9%	46.1%	43.9%
Current Smokeless Tobacco Use	2.3%	3.0%	3.0%	3.1%
Current Cigar Use	10.5%	10.9%	11.4%	11.1%
Ever used chewing tobacco, snuff, or dip	11.4%	12.5%	7.9%	9.3%
Ever Tried smoking cigars, cigarillos, or little cigars	35.7%	34.5%	33.3%	30.6%
Ever Tried bidis &/or kreteks *	18.1%	16.2%	9.7%	10.7%

Source: California Student Tobacco Survey (CSTS)

<http://www.cstats.info/>

The CSTS is weighted to the 2001 California student population by grade level, race/ethnicity, and gender. The estimates represent the percentage of youth who report having used particular tobacco products.

† Current smokers are defined as the percentage of high school youth who report smoking on one or more of the 30 days prior to the survey.

‡ Daily smokers are defined as the percentage of high school youth who report smoking on all 30 of the days prior to the survey.

§ Ever smokers are defined as the percentage of high school youth who report ever having smoked a cigarette (even a puff or two) in their entire life.

*Bidis (pronounced “bee-dees”) are small, thin hand-rolled cigarettes imported to the United States primarily from India and other Southeast Asian countries. They consist of tobacco wrapped in a tendu or temburni leaf (plants native to Asia), and may be secured with a colorful string at one or both ends. Bidis can be flavored (e.g., chocolate, cherry, and mango) or unflavored. They have higher concentrations of nicotine, tar, and carbon monoxide than conventional cigarettes sold in the United States.

Kreteks (pronounced “cree-techs”) are sometimes referred to as clove cigarettes. Imported from Indonesia, kreteks typically contain a mixture consisting of tobacco, cloves, and other additives. As with bidis, standardized machine-smoking analyses indicate that kreteks deliver more nicotine, carbon monoxide, and tar than conventional cigarettes. There is no evidence to indicate that bidis or kreteks are safe alternatives to conventional cigarettes.

<http://www.cdc.gov/tobacco/factsheets/bidisandkreteks.htm>

CORE INDICATORS

For data on the most commonly requested public health indicators, follow link to the [Core Public Health Indicators Document](#), published in 2004.

The Core document contains data for California, San Diego County, and each Health Service Region when available, as well as the Healthy People 2010 objectives.

Information contained in these tables includes the following:

- **Health Behaviors:** Alcohol, Tobacco and Other Drug Use, Nutrition, Overweight, Physical Activity
- **Health Status:** Limited Activity, Poor Health
- **Social & Physical Environment:** Air Quality, Childcare, Education, Lead Exposure, Poverty, Violence/Abuse, Violent Deaths
- **Health Care Access:** Immunizations, Health Insurance, Prenatal Care, Regular Source of Care
- **Health Outcomes:** AIDS, Asthma, Breast Cancer, Cardiovascular Disease, Cervical Cancer, Diabetes, Hepatitis, Fetal and Infant Mortality, Birth-related Outcomes and Birth to Teens, Lung Cancer, Sexually Transmitted Diseases, Suicide, Tuberculosis
- **Safety Outcomes:** Firearm-related Injuries, Poisonings, Unintentional Injury, Hip Fractures, Injury Prevention
- **Top 10 Causes Of Death For San Diego County 2002**

TREND DATA

For trend data for selected health indicators, follow link to the [Trend Document](#), published in 2005.

The Trend document contains several years worth of data on selected public health indicators; most indicators are from the [Core Public Health Indicators Document](#). Data is available for several years for San Diego County. Data is also shown in tables by Health Service Region, Race/Ethnicity, Age Group, or Gender, when available.

Information contained in these tables includes the following:

- Cancer: Cervical Cancer, Breast Cancer, Lung Cancer Deaths
- Heart Disease: Coronary Heart Disease Deaths
- Diabetes: Hospitalizations, Diabetes-Related Deaths
- Disease Incidence: Tuberculosis, AIDS, Chlamydia, Primary and Secondary Syphilis
- Infant Health: Infant Mortality, Late or No Prenatal Care, Low Birth Weight, Births to Young Girls
- Other: Elevated Blood Lead Levels (EBLL), Suicides, Homicides
